

WEIGHT LOSS

Go beyond the scale

Use body composition analysis to fine tune diet and exercise plans for your clients to reach their health goals

WEIGHT LOSS ≠ FAT LOSS

Weight loss doesn't mean fat loss.

Go beyond the scale and show your clients how they're changing from the inside out by analyzing their fat, muscle, and water in less than 15 seconds.

With the InBody 270, you can focus on your clients' fat loss and not just weight loss.

SEE WHAT YOU'RE MADE OF

At the end of each InBody Test, your clients will receive a result sheet printout with a matching copy sent to their phones that shows:

-  **Pounds of muscle** in each body segment
 -  How their **body composition changes** over time
 -  Minimum **number of calories** needed to power their body
- and more!

InBody 270 Sample Result Sheet

InBody

[InBody270]

SEE WHAT YOU'RE MADE OF

ID	Height	Age	Gender	Test Date / Time
John Doe	5ft.08.9in.	30	Male	07.19.2015 12:45

Body Composition Analysis

Total amount of water in body	Total Body Water (lbs)	106.3
For building muscles and strengthening bones	Dry Lean Mass (lbs)	39.0
For storing excess energy	Body Fat Mass (lbs)	107.4
Sum of the above	Weight (lbs)	252.7

Body Fat-Lean Body Mass Control

Body Fat Mass - 81.8 lbs
Lean Body Mass + 0.0 lbs
(+) means to gain fat/lean (-) means to lose fat/lean

Lean Body Mass _____
127.4 lbs

Basal Metabolic Rate _____
1793 kcal

Results Interpretation

Body Composition Analysis
The body weight is the sum of Body Fat Mass and Lean Body Mass, which is composed of Dry Lean Mass and Total Body Water.

Muscle-Fat Analysis
Compare the bar lengths of Skeletal Muscle Mass and Body Fat Mass. The longer the Skeletal Muscle Mass bar is compared to the Body Fat Mass bar, the stronger the body is.

Obesity Analysis
BMI is an index used to determine obesity by using height and weight. PBF is the percentage of body fat compared to body weight.

Segmental Lean Analysis
Evaluates whether the amount of muscle is adequately distributed throughout the body. Compares muscle mass to the ideal.

Body Composition History
Track the history of the body compositional change. Take the InBody Test periodically to monitor your progress.

Body Fat-Lean Body Mass Control
Based on current body composition, the recommended change in Lean Body Mass and Body Fat Mass for a good balanced ratio. The '+' means to gain and the '-' means to lose.

Basal Metabolic Rate
Basal Metabolic Rate is the minimum number of calories needed to sustain life at a resting state. BMR is directly correlated with Lean Body Mass.
